Art Unit: 2652

Claims 1-16 are pending.

***Election/Restrictions***

1. Claims 1-10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in Paper No. 10.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 11-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 11, the language that includes “a stopper of the drive” and further cooperation of the stopper with the “stop feature” is considered indefinite. The preamble sets forth a “cartridge”, however, the “stopper” which is part of the drive, is not a part of the cartridge. Therefore, the metes and bounds of the claims are not readily ascertained. Claim 15 and 16 recite further details of the stopper which would not encompass the cartridge either.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2652

5. Claims 11-13, 15-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Ishigami (US 3,893,184). Ishigami discloses a cartridge 3 for being received into a storage drive and retained therein, as shown primarily in FIGs. 1 & 3, including: a shell (unnumbered); a storage media (tape) disposed within the shell as would be readily realized; a stop feature which would include notches 4<sub>1</sub> and 4<sub>2</sub> which would cooperate with a mechanism (stopper) in the drive to stop the ejecting cartridge at a predetermined ejection travel distance (FIG. 3 and col. 3, lines 15-32).

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ishigami. For a description of Ishigami, see the rejection, supra. While Ishigami is directed to a "tape" cartridge, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have utilized the above retaining configuration in a disc cartridge as well. The motivation would have been: lacking any unobvious or unexpected results, a skilled artisan utilizing the stop feature on a disc cartridge would have realized the same advantages as in a tape

cartridge as described by Ishigami, e.g., compact ejection operation employing reduced number of parts (see col. 3, lines 24-32).

***Conclusion***

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure including: US Patents to Pollard (5,805,561) and Bass (5,134,603) which are considered to show a "stop feature" for a cartridge.
